The latest update, which Adobe calls both Version 24 and Photoshop 2023, brings technology announced at the annual Adobe Max conference in October. Highlights include simpler, more accurate Object Selection; One Click Delete and Fill, a new way to remove an object from a scene; and integration with Adobe Express. New features still in beta include Live Gaussian Blur, Live Gradients, a new Neural Filter for photo restoration, and Share for Review—another collaboration feature. For Windows users, a new option lets you choose whether you want auto selection to happen faster or with more stability. So, was Adobe successful in providing a stable, capable update for its long-time users? Is Lightroom 5 likely to attract new customers, who previously avoided what may be considered a Camera RAW plugin dressed in a suit of extra functionality? In this article, I will review the latest version of Lightroom and discuss its newly gained features in detail. I will also talk about what could have been better in Lightroom 5 so as to, by the end of the article, help you make up your mind whether purchasing or upgrading to this popular piece of software is beneficial to you. Intuitive in design but capable of a lot when used correctly, Lightroom 5 is a great upgrade from previous versions. One thing that has done very well is that the number of options available to you when editing has been reduced. The interface is clean and easy to navigate, and the Actions panel gives you a nice place to store frequently used settings. And if you're a seasoned Lightroom user, this version offers some great new features. The addition of the Brush panel has been noted for months now and was probably the biggest change in Lightroom since the introduction of Version 5 in 2011. The Bracketing panel lets you shoot HDR images, and the Lens Correction options now give you the control you have with any other dedicated Nik app. The Mission Control panel just makes it easier to adjust settings quickly.
